

COMPACJAC KING-PIN WALKING FOOT

OVERVIEW

Pushing the limits of compact design, the CompacJac still matches its bigger siblings in capability. Despite its size, it employs a 24" travel stroke, travel in any direction, spin mode, 12" lift stroke, and our standard lifting capacities.

Because of its diminutive height, the CompacJac can fit in virtually every rig. Once installed, this machine won't eat up crane time. It is opening the door to new rig designs.

- 38 inches tall (600,000 lbs capacity)
- Adjustable steering allows travel in any direction
- Extensive array of customizable rig mounting options: Pin-On, Pony-Sub, Low Profile, Super Stomper, etc.
- Yaw restoration device maintains foot alignment
- Fully compatible and interchangeable with the King-Pin family
- Autowalk and autolift option available
