

HEAVY HAUL JEEPS

OVERVIEW

Entro heavy haul load dividing Jeeps are custom built for some of the most demanding applications. Entro jeeps are used for moving multi-million pound trailers with pull trucks that need additional king pin capacity. The available split axle walking beam allows greater articulation while reducing stress on the axles and jeep frame. The jeeps can be custom configured to fit specific requirements.

- Entro custom extreme duty axles and wheels
- Entro custom 5th-wheel plate has simple, redundant locking jaws that connect to the trailer king pin assembly
- Front loading hitch allows pull-truck to connect and disconnect the jeep king pin to pulltruck 5th-wheel using a standard truck winch

TECHNICAL SPECIFICATIONS

CAPACITY	400,000 lbs (Shown) – Other Sizes Available
FRAMES	No Drop, Single Drop, Double Drop
AXLE	Custom Entro
KING PINS	Standard 3-1/2" Typical (Other Sizes Available)
SUSPENSION	Split Axle Walking Beam (Shown)
