

# CONTROL CONSOLES

CUSTOM ENGINEERED TO YOUR REQUIREMENTS

## OVERVIEW

Our control consoles can vary widely, from manual handle control only to automated motions based on sensor data. Wireless remote controllers are a popular added feature due to the increased safety, flexibility and visibility. With all automated options, manual control is available as a backup.

Our consoles have several options for mounting. Removable, stand-alone consoles can be placed next to a hydraulic system on site. They are typically

mounted to a skid with forklift pockets and lifting lugs for handling. The permanent and semi-permanent options are bolted, welded, or hook-on consoles. The placement of the consoles is carefully considered for best visibility of the machinery, safety of the operator and convenience of the hookups.

All systems are fully tested prior to shipping to ensure that each entire system works properly before leaving the factory.

## TECHNICAL SPECIFICATIONS

ENVIRONMENTAL	IP67 / IP69 / Explosion Proof
OPERATOR'S STATIONS	Fixed / Mobile / Manual / Electric / Wireless
STRUCTURE	Skid Mounted / Crash Frames / Mobile / Integrated
VALVES	Manual / Electric
CONTROLS	Simple Manual / Programmable PLC
